

State of Colorado Monthly Cyber Security Tips

October 2007

Volume 2, Issue 10

Protect Your Child Online!

October is National Cyber Security Awareness Month. This year's national campaign goal is to increase public awareness of cyber security and cyber crime issues. Increasing awareness of the dangers and threats on the Internet gives you additional perspective on necessary precautions you should be taking to avoid these threats. The Multi-State Information Sharing and Analysis Center (MS-ISAC) is sponsoring the Kids Safe Online web cast in celebration of National Cyber Security Awareness Month. The October 17th broadcast features an interactive play geared for 4th and 5th graders. The play will feature entertaining skits to help children learn more about cyber security and how to be safe when using computers and the Internet. Students, educators and parents are encouraged to view the web cast!

To register for the web cast go to: www.msisac.org/webcast/10_07/index.cfm.

Children present unique security risks when they use a computer. The National Cyber Security Alliance, a partner in the National Cyber Security Awareness Month initiative, offers the following tips to help keep children safe and protect them from the dangers of unsafe practices when using the Internet. By taking these simple steps, you can reduce the threats to your child.

1. Keep your computer in a central and open location in your home and be aware of other computers your child may be using.
2. Discuss and set guidelines and rules for computer use with your child. Post these rules by the computer as a reminder.

3. Use the Internet with your child. Familiarize yourself with your child's online activities and talk with your children about what applications they are using and their online habits.
4. Consider using software that allows you to monitor your child's e-mail and Web traffic.
5. Know who your child's online friends are and supervise their chat areas.
6. Implement parental control tools that are provided by some Internet Service Providers and available for purchase as separate software packages. Remember, no program is a substitute for parental supervision. You may be able to set some parental controls within your browser. To find these options in Internet Explorer for example, click **Tools** on your menu bar, select **Internet Options**, choose the **Content tab**, and click the **Enable** button under **Content Advisor**. (For other browsers, contact the vendor to determine what parental controls are included.)
7. Consider partitioning your computer into separate accounts. Most operating systems give you the option of creating a different account for each user. If you're worried your child might accidentally access, modify, or delete your files, you can give your child a separate account and decrease the access and number of privileges your child has.
8. Teach your child to NEVER to give out personal information to people he or she meets online, such as in chat rooms or bulletin boards.
9. Know who to contact if you believe your child is in danger and contact the police immediately if a stranger tries to set up a meeting with your child. Report on-line child pornography to your Internet Service Provider and to the National Center for Missing and Exploited Children at 1-800-843-5678. For more detailed information visit www.getnetwise.org or the Colorado Attorney General's website at <http://www.ago.state.co.us/InternetSafety/SafeSurfing.cfm>.
10. If you know of a child in immediate risk or danger, call law enforcement immediately. Report instances of online child exploitation to the National Center for Missing and Exploited Children's Cyber Tipline at www.missingkids.com.

Children need advice, guidance, and protection. Talk to your child and let him or her know you can be approached with questions about behaviors or problems encountered on the computer.

Teach your child how to safely use the computer and the Internet. The following Web sites are available as resources.
